

CASE STUDY

As the biggest survey company in the Nordics, LE34 paves the way for tomorrow's major climate, construction and infrastructure projects.

When the Swedish subsidiary started growing, they knew it was time to look for a professional business solution.

THE SITUATION

When LE34 set foot in Sweden, a small, not integrated module system was enough.

7 years later they had grown from 3 to 30 employees (50 planned in short) and are now dealing with about 300 projects per year. Looking for an integrated system that would replace the small islands for time and expense reporting they had been using so far wasn't an option anymore.

THE CHALLENGE

There was no automation at all, all was manual. To the point where the accountant would type the same data three times.

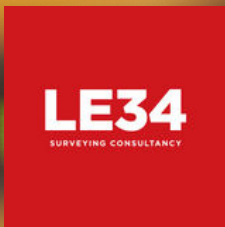

Because of the positive experience with Navision in the Danish headquarters, where they deal with about 12,000 projects per year, they decided to go for Business Central.

Steen Nielsen
CFO at LE34

”

We needed an integrated professional ERP to leave behind the separate systems we had. Since we sell hours, project management capabilities like the ones from Progressus Advanced Projects were of vital importance to us.

THE SOLUTION: PROGRESSUS ADVANCED PROJECTS

From the operational perspective, since Time & Expense reporting are crucial to LE34, they needed to be simple and logic.

From the financial management perspective, the focus was set on quick and flexible invoicing.

THE BENEFITS

- We can now **set up projects** in one minute using templates that we build as we wish. It's all about data discipline, so that everything sits right in the system.
- **Time & Expense** are key for us. We had no problems when we went live. The second day after using Progressus, all our time reporting was booked. It was very successful. All employees thought that it was very easy to understand.
- If all relevant project data are entered when creating a project, it **only takes a minute to issue an invoice** exactly the way the customer wants to have it.
- We simply love the **invoice suggestion**. It's brilliant compared to what we have in Denmark. It has helped us streamline the invoicing process.
- The **invoice specification** is a good feature to outline the hours we have spent per day on a specific project.
- Compared to the old system we now have a transparent ERP-system with a **fantastic controlling environment** including business intelligence tools.

CFO at LE34

THE NEXT STEPS

For the sake of full integration, budgeting and planning will be implemented in phase #2. This will replace the Excel sheets that are currently being used for forecasting.

Progressus Advanced Projects will also be implemented in the Danish headquarters in the near future. With its 450 employees, 23 offices and 12,000 projects per year, a challenging implementation we're really looking forward to start with our Danish partner [Elbek & Vejrup](http://www.elbek-vejrup.dk).
