

It's all about **working as ONE.**

Cross-company data sharing solution. Share data across companies within a group in a consistent way eliminating manual data aggregation.

Ensure data consistency and process automation aiming to work as ONE.

## Struggling to share data in a reliable way?

### ENSURE **MASTER DATA** CONSISTENCY WITHIN THE GROUP\*

Master data is the basis for intercompany projects. It refers to **customers, resources and projects**. Transfer data between different tenants (data bases) regardless of their location. Improve your data quality by sharing it in a reliable way. Forget about manually copying data from one business to another.

Maintain a **single copy of master data** to ensure consistency of important information that is shared across companies within a group.

Whether in the form of centralised data sharing, or in the form of dynamic data exchange, choose which scenario suits you best. With the first option you act as the primary source of data for the entire group. Whereas with the second option you and other companies within the group can easily transfer data to one another as needed.

In both cases you're ensuring that all companies in the group have access to the same accurate and up-to-date information.

## Facing collaboration issues at an operational level?

### ENABLE **COLLABORATION** BETWEEN COMPANIES TO OPERATE AS ONE

Streamline and automate your intercompany projects in an integrated process through:

- Automated **creation of intercompany projects** for resources in other legal entities.
- Automated **transfer of time entries** for instant control over time spent on intercompany projects.
- **Timely client invoicing** and improved cash flow .

Maximise the value of all individual resources within the group to improve performance on all levels. Ensure that all resources, regardless of their location, are working towards a common goal.
